Tamarack updates middleware to support Vertex® O Series® version 5.0

Minnesota-based Tamarack Consulting has updated its *Tamarack Integration for Vertex O Series®* software to support version 5.0 of Vertex® Indirect Tax O Series® for Leasing.

The upgrade makes *Tamarack Integration for Vertex O Series* the only middleware that connects International Decision System's InfoLease® portfolio management system with Vertex O Series, a revolutionary tax platform that centralizes all corporate tax processing.

"As lessors continue to look for ways to improve efficiency in operations, this update delivers the ability to leverage the flexibility and accuracy of Vertex O Series version 5.0," said Daniel Nelson, president of Tamarack Consulting, Inc. "As Vertex O Series is a centralized tax decision engine, administration of tax compliance becomes external to InfoLease, and the back-end system is no longer subject to the limitations and manual tracking inherent with lease tax exceptions."

The latest version of the integration includes a generic field mapping utility that enables users to customize and map virtually any InfoLease field to the "Taxability Drivers" and "Flexible Fields" built into Vertex O Series, ensuring accurate sales tax calculations even under the most challenging tax scenarios.

"Vertex O Series is a flexible, centralized solution that allows users in the leasing industry to ensure the data they need for accurate tax calculation is at their fingertips," said Doug Cohen, Sr. Channel Manager, Vertex Inc. "We are pleased that consulting companies like Tamarack are in the market to enhance the implementation and integration processes bringing the client's legacy systems to a new level."

The recent software update strengthens Tamarack's portfolio integration product line which also includes BridgeWare Integration Framework and WebCollect Interface.

Based in Woodbury, Minnesota, [Tamarack Consulting, Inc.](http://www.tamarackconsulting.com) provides integration products, consulting, training, and product development to the equipment finance industry.
